PROFILE

Vasilis is the co-founder of NopServices, a company which specializes in providing high end web solutions to its customers. Our philosophy is to balance entrepreneurial insight with creative flair and programming expertise. Experience, reliability, hard work and innovation are the key pillars of our business strategy.

Vasilis is responsible for leading the company's web and application development that promotes excellence and drives innovation and business growth. His priority is to deliver challenging projects, in collaboration with NopServices experienced development team, on time, and according to specifications. He has the ability to understand and transform complex business requirements into software, ensuring that the deliverables are scalable, performance optimized and maintainable.

He writes code in a high-paced and challenging environment with emphasis on using best practices to develop high quality software that meets project requirements, budget, and schedule.

Prior founding NopServices he was mainly working as a freelancer, undertaking projects for many companies in Greece, U.S.A., Australia and Canada.

EXPERIENCE

NopServices

Co-founder / Senior web developer

January 2013 - Present

Main responsibilities:

- E-commerce solution development
- Designing and developing new products and themes for NopCommerce
- Consulting services to our customers
- Co-ordination of our external partners
- Expanding our customer base

Juke Corporation

Front end developer

June 2012 – January 2013

Projects participated:

Zim2

Zim2 is a web based application with many features about school demographics, product packaging and tracking. The most challenging task working on Zim2 was the very large amount of data that needed to be managed and handled.

Main technologies used:

C#, SQL Server, Entity Framework, Knockout Js, Web services

EOSMG

Software engineer and team leader

[September 2011 – June 2012](#)

Projects:

Nereus

Nereus Information System is a multi-layered data entry and confirmation system that handles the entire paperwork and logistics of the ship between the crew and the office personnel using the ISM code.

OfficeManager

The real-time monitoring of data and log book in electronic form, giving accurate information to the technical management team in the mainland office, in order to maintain the certificates of the fleet round the clock.

Freelancer

C# Web developer

[June 2010 – January 2013](#)

Mostly working on Umbraco and NopCommerce projects, but also on custom web applications for various customers.

AMCO S.A.

Junior C# Web developer

[January 2009 – May 2010](#)

Main responsibilities:

- Maintaining and extending a large scale middleware application in ASP.net and SQL Server using Telerik Controls
- Developed a custom web portal from scratch
- Extended a windows mobile 6.0 application
- Created several web services for e-ticketing applications
- Created a LED display management application

Main technologies used:

ASP.NET, C#, Telerik controls, Windows mobile, C#, SQL Server compact, SQL Server 2005, XML
